**Safe as houses - no shocks!**  
The famous Australian built Clipsal Safety Switch has been saving lives since the '70s. The well-known switchboard version offers protection to every power point in the home. Other models include twin power outlets, plug tops and extension leads for safety when using power tools outdoors. Although one safety switch is compulsory in new homes, it is smarter to use separate safety switches for each circuit. That way, one incident doesn't cut the power to your whole house and plunge you into darkness. Insist on a Clipsal Safety Switch because it's a proven product, guaranteed to save lives.

**Arrest that power surge!**  
Power surges can be caused by accidents or electrical storms, and can damage expensive electronic circuitry in equipment such as televisions, computers and videos. Insurance often does not cover damage caused by power surges, so surge protection is essential in every home. Surge protection can be switchboard mounted to protect every power point in the home, or individual surge protected power outlets are available.
