RCD protected power outlet

Safety in the home
The famous Australian built Clipsal Safety Switch has been saving lives since the '70s. The well-known switchboard version offers protection to every power point in the home.

Other models include twin power outlets, plug tops and extension leads for safety when using power tools outdoors. Although one safety switch is compulsory in new homes, it is smarter to use separate safety switches for each circuit. That way, one incident doesn't cut the power to your whole house.
